AI ASSISTED CODING

ASSIGNMENT-14.4

Name: Veeramaneni Sruthi

Ht.no:2303A51308

Batch:05

Task 1: Responsive Homepage Layout for a Startup Website

Task Description

• Create a web page structure using HTML that includes:

o A header with navigation links

o A main content section

o A footer with basic information

• Use AI assistance to generate responsive CSS using media

queries.

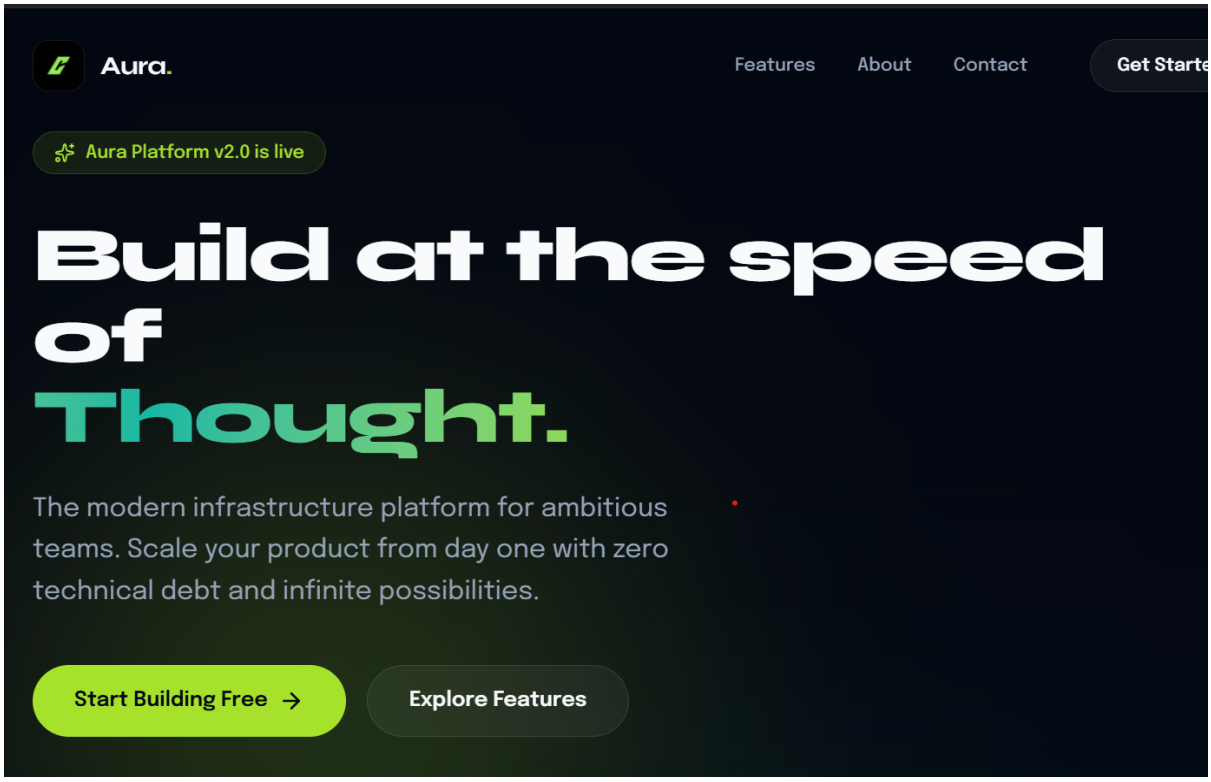
• Ensure the layout adjusts smoothly across different screen sizes

Prompt:

Generate HTML and responsive CSS for a simple startup website homepage. The page should include a header with navigation links (Home, About, Services, Contact), a main content section with a welcome message, and a footer with basic information. Use CSS media queries to make the layout responsive for desktop, tablet, and mobile screens.

Generate HTML and responsive CSS for a simple startup website homepage. The page should include a header with navigation links (Home, About, Services, Contact), a main content section with a welcome message, and a footer with basic information. Use CSS media queries to make the layout responsive for desktop, tablet, and mobile screens.

Output:



Explanation:

The webpage uses HTML to create a header, main content, and footer section.CSS is used to style the layout and arrange the navigation links. Media queries are added to make the webpage responsive on mobile, tablet, and desktop screens. This ensures the layout adjusts properly and looks good on all devices.

Task 2: Interactive Call-to-Action Button

Task Description

• Add a button to a web page using HTML.

• Use AI to generate JavaScript that responds to the button click by:

o Displaying a message or alert

• Ask AI to add meaningful comments explaining the JavaScript

logic.

Prompt:

Generate a simple web page using HTML and JavaScript with an interactive call-to-action button.

Requirements:

Add a button labeled "Get Started".

When the button is clicked, display an alert message like "Thank you for your interest!".

Use JavaScript to handle the button click event.

Add clear and meaningful comments in the JavaScript explaining the logic.

Ensure the page does not reload when the button is clicked.

Provide both HTML and JavaScript code.

Generate a simple web page using HTML and JavaScript with an interactive call-to-action button.

Requirements:

Add a button labeled "Get Started".

When the button is clicked, display an alert message like "Thank you for your interest!".

Use JavaScript to handle the button click event.

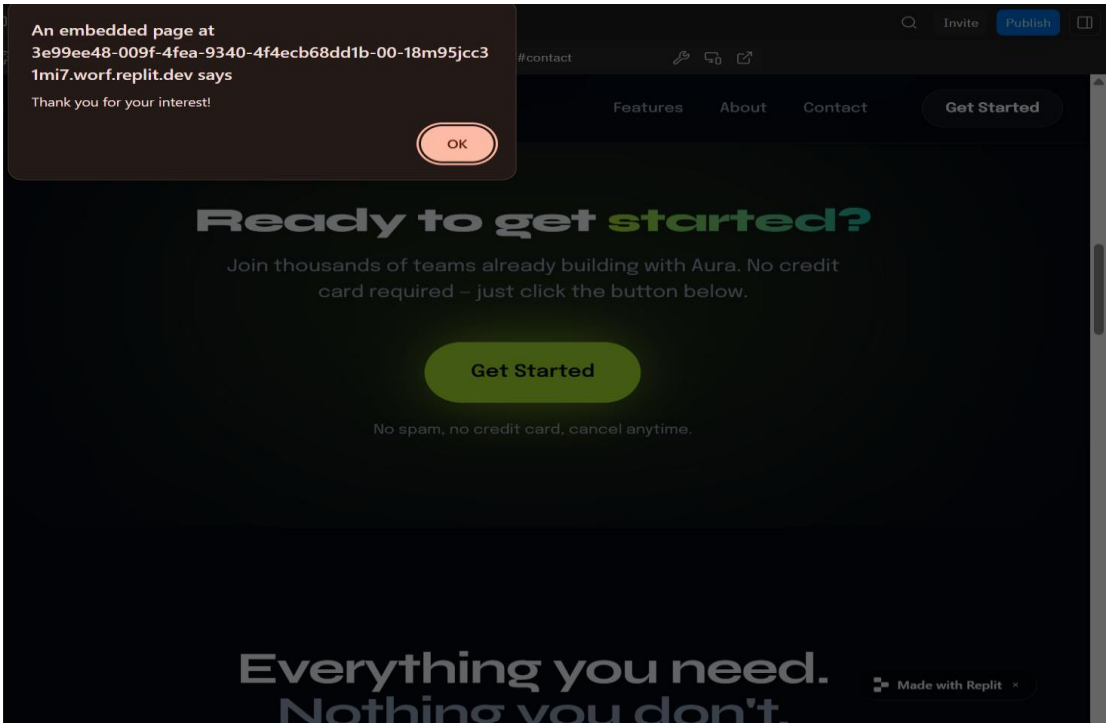
Add clear and meaningful comments in the JavaScript explaining the logic.

Ensure the page does not reload when the button is clicked.

Provide both HTML and JavaScript code.

Keep the code simple and beginner-friendly.

Output:



Explanation:

A button is added using HTML to create a call-to-action element.
JavaScript is used to detect when the button is clicked. When the user clicks the button, an alert message is displayed on the screen. The action happens instantly without reloading the webpage.

Task 3: Contact Form with Client-Side Validation

Task Description

• Design a form with fields for:

o Name

o Email

o Message

• Use AI to generate JavaScript validation logic that:

o Prevents empty submissions

o Checks for a valid email format

• Display clear error messages for invalid input.

Prompt:

Generate a simple contact form using HTML and JavaScript.

Requirements:

- Create a form with fields: Name, Email, and Message.
- Add a Submit button.
- Use JavaScript for form validation.
- Do not allow the form to submit if any field is empty.
- Check if the email format is valid.
- Show clear error messages for invalid inputs.
- Add simple comments in the JavaScript explaining the code.
- Provide HTML and JavaScript code.

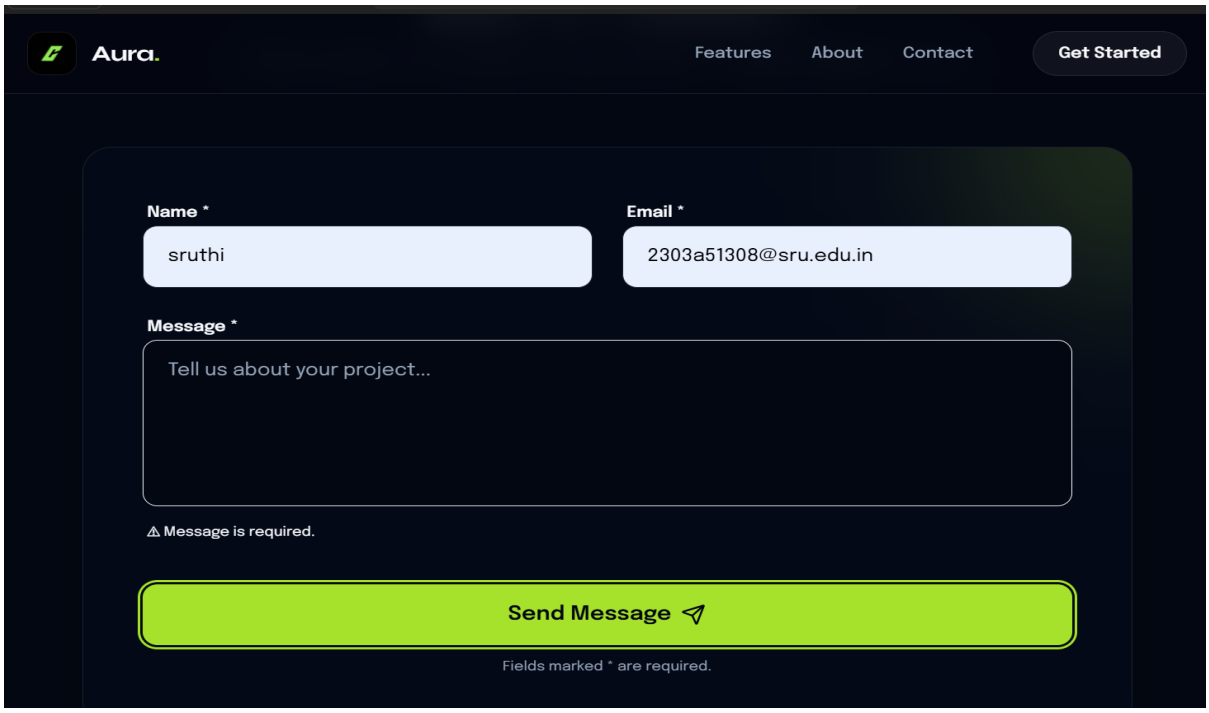
Generate a contact form using HTML and JavaScript.

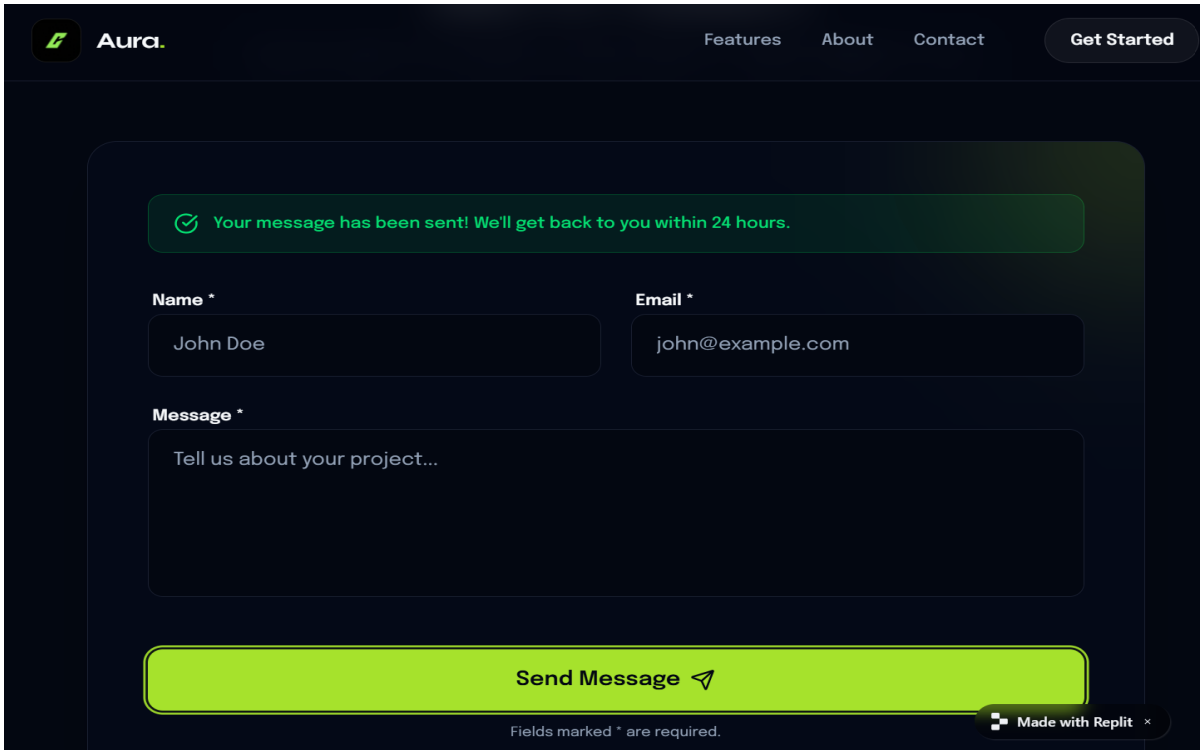
Requirements:

- The form should include Name, Email, and Message fields.
- Add a submit button.
- Use JavaScript for client-side validation.
- Prevent form submission if fields are empty.
- Check that the email format is valid.
- Display clear error messages for invalid inputs.
- Show a success message when all inputs are valid.
- Add comments in the JavaScript code explaining the validation logic.

Provide both HTML and JavaScript code.

Output:





Explanation:

A contact form is created using HTML with fields for name, email, and message.JavaScript validation checks if the fields are empty and if the email format is correct.If the input is invalid, error messages are shown near the fields.If all inputs are valid, a success message is displayed without reloading the page.

Task 4: Dynamic List Management for a Product Page

Task Description

• Create a simple HTML list to display items.

• Use AI to generate JavaScript that:

o Adds a new item when an “Add” button is clicked

o Removes the last item when a “Remove” button is clicked

• Ensure the DOM updates dynamically.

Prompt:

Generate a simple web page using HTML and JavaScript for dynamic list management.

Requirements:

Create a simple HTML list to display items.

Add an “Add” button to insert a new item into the list.

Add a “Remove” button to delete the last item from the list.

Use JavaScript to handle the button click events.

Ensure the list updates dynamically in the DOM.

Add simple comments in the JavaScript code explaining the logic.

Provide both HTML and JavaScript code.

Generate a simple web page using HTML and JavaScript for dynamic list management.

Requirements:

Create a simple HTML list to display items.

Add an “Add” button to insert a new item into the list.

Add a “Remove” button to delete the last item from the list.

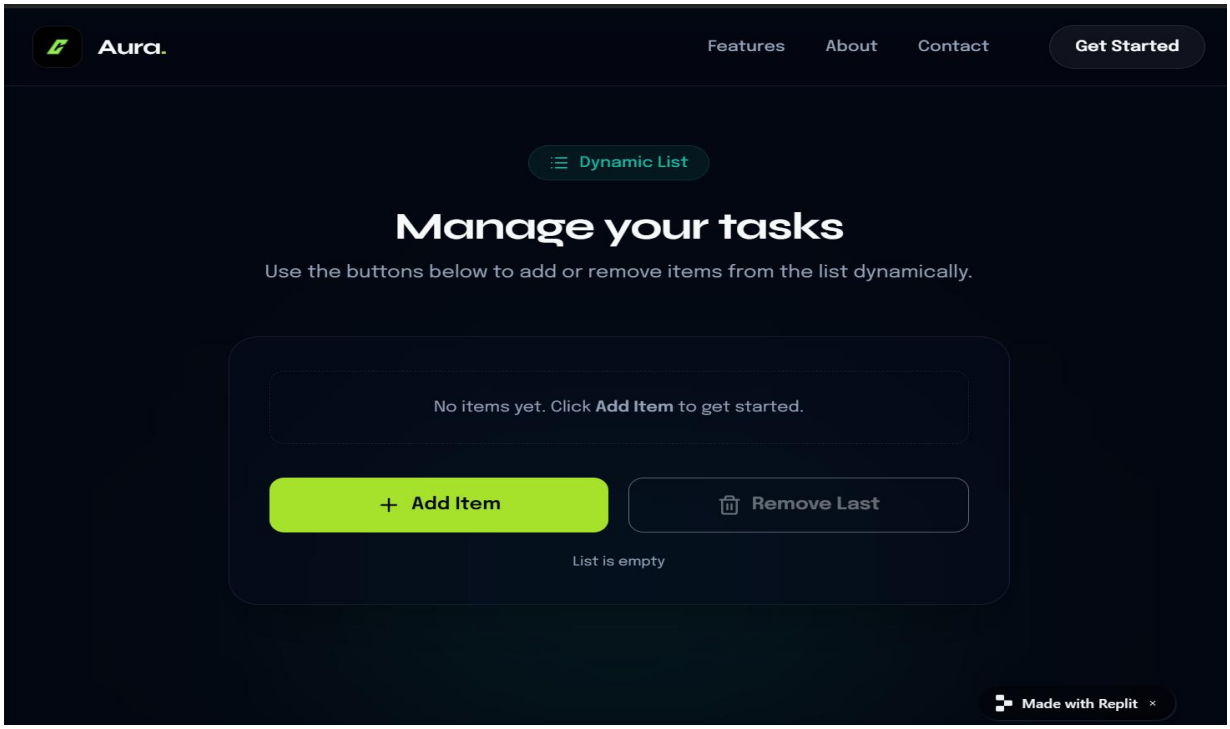
Use JavaScript to handle the button click events.

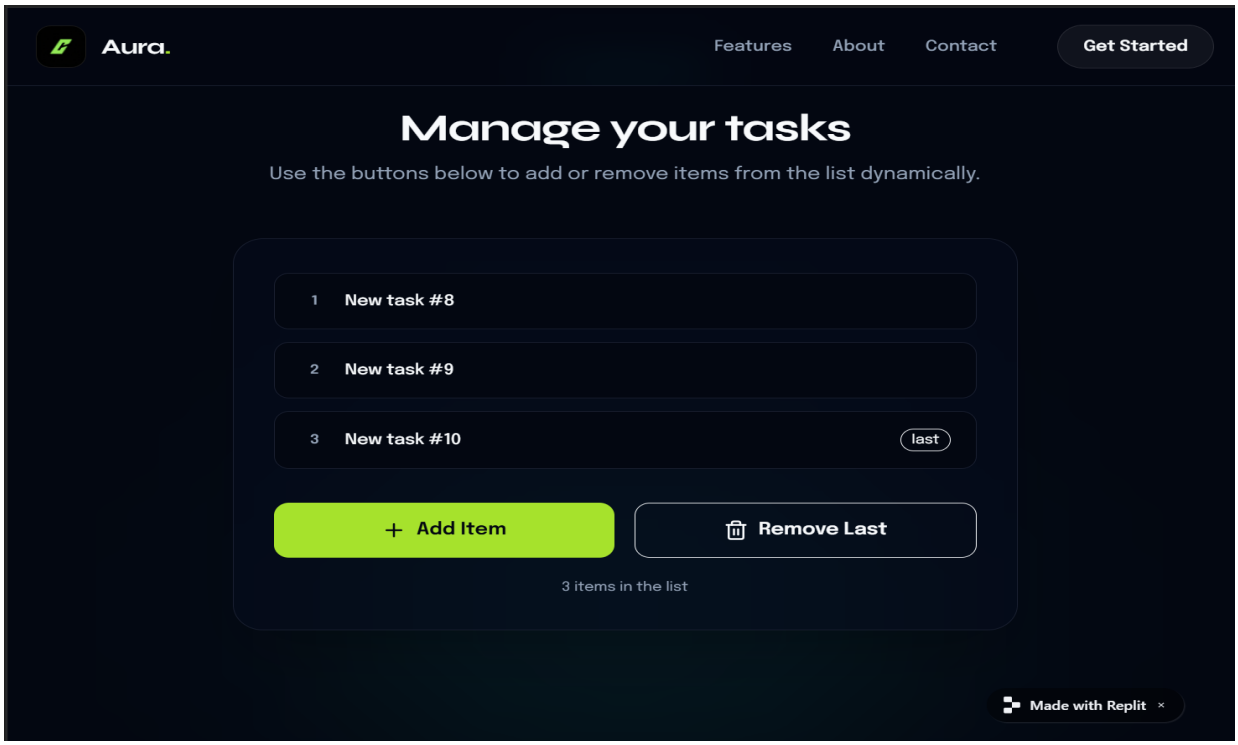
Ensure the list updates dynamically in the DOM.

Add simple comments in the JavaScript code explaining the logic.

Provide both HTML and JavaScript code.

Output:





Explanation:

A simple HTML list is used to display product items on the webpage. JavaScript is used to dynamically add a new item when the “Add” button is

clicked and remove the last item when the “Remove” button is clicked. The list updates instantly without refreshing the page, making the page interactive.

Task 5: Modal Popup for User Notifications

Task Description

• Use AI to help generate:

o HTML structure for a modal popup

o CSS styling with a semi-transparent background overlay

o JavaScript to open and close the modal

• Include multiple ways to close the modal (button or overlay

click).

Prompt:

Generate a simple startup landing page with a modal popup using HTML, CSS, and JavaScript.

Requirements:

Create a header with the website name and navigation/menu icon.

Add a main section with a heading, description, and buttons.

Include a button labeled "Open Modal".

Design a modal popup with a title, message, and two buttons.

Add CSS styling with a semi-transparent background overlay.

Use JavaScript to open the modal when the button is clicked.

Allow the modal to close when the close button (×) or overlay is clicked.

Add comments in the JavaScript explaining the logic.

Provide HTML, CSS, and JavaScript code.

Generate a simple startup landing page with a modal popup using HTML, CSS, and JavaScript.

Requirements:

Create a header with the website name and navigation/menu icon.

Add a main section with a heading, description, and buttons.

Include a button labeled "Open Modal".

Design a modal popup with a title, message, and two buttons.

Add CSS styling with a semi-transparent background overlay.

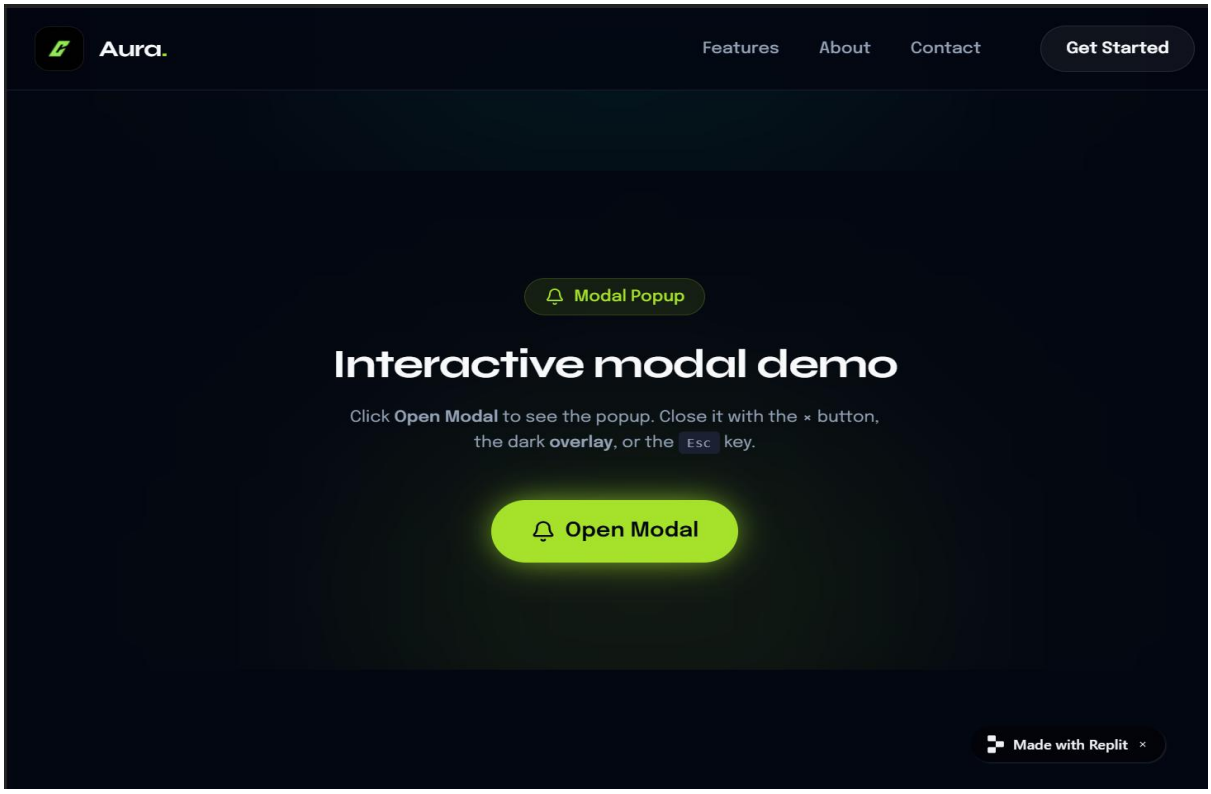
Use JavaScript to open the modal when the button is clicked.

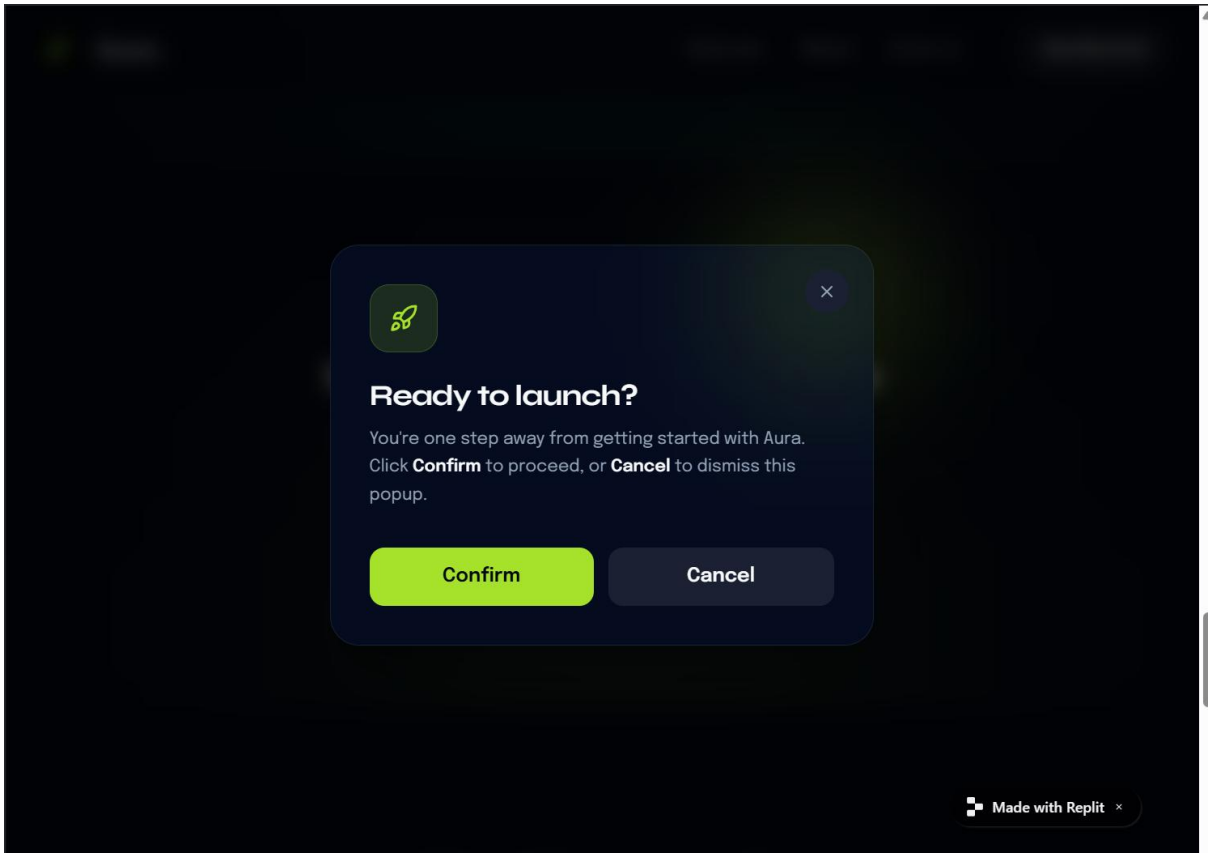
Allow the modal to close when the close button (×) or overlay is clicked.

Add comments in the JavaScript explaining the logic.

Provide HTML, CSS, and JavaScript code.

Output:





Explanation:

This project creates a modal popup notification using HTML, CSS, and JavaScript. When the “Open Modal” button is clicked, a popup appears over the page with a semi-transparent background.
The modal can be closed by clicking the close button or the overlay.
All actions happen without reloading the webpage.
